1. Applicant's amendments have been fully and carefully considered and have been found persuasive. Applicant's petition to correct inventorship has been entered and accepted. The drawing filed on March 14, 2005, depicting element (18) is entered and accepted.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Brett North on April 11, 2005.

The application has been amended as follows:

In the Claims:

Claim 1, line 2, delete "with a periphery"; line 6, delete "periphery thereof" and insert -- surface--

Claim 27, line 2, delete "with a periphery"; line 5, delete "periphery thereof" and insert -- surface--

Claim 42, line 3, delete "with a periphery"; line 9, delete "periphery thereof" and insert -- surface--

3. The following is an examiner's statement of reasons for allowance:

The invention relates to a spinning disc reactor or RSORT reactor which includes a support element rotatable about an axis, the support element having a surface and feed means associated therewith for supplying at least one reactant to the

Art Unit: 1764

surface, such that upon rotation of the surface, the reactant flows freely, solely by way of centrifugal force generated by rotations of the surface, across the surface as a thin film and is thrown from the surface wherein the surface is substantially planar and wherein there is provided a shear member formed as a peripheral basal surface of a dome or canopy or cylindrical or tubular member, the shear member being disposed in close proximity to but not mounted on the surface so as, in use, to contact the thin film only where it passes between the peripheral basal surface and the surface and not at other locations on the surface and to impart a shearing force to the reactant on the surface when the support element is rotated. The prior art fails to teach and/or suggest providing a shear member which is close proximity to but not mounted on the surface so that in use, the reactant flows as a thin film only where it passes between the peripheral basal surface and the surface and not at other locations on the surface.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.
